Phil,

Juan, on behalf of Occidental, mentioned they would be working with the Haysville Public Library to get documents provided by sometime in August 2015. The documents mentioned included the Semi-Annual Groundwater Monitoring Reports (at least those for the present and into the future) and some other major documents that would have information critical for future corrective action decisions, such as the RCRA Facility Investigation Report. Those documents could be hardcopies or they could be electronic copies.

For the present, the most recent Semi-Annual Reports are available on EPA Region 7's website, but I will discontinue that after Occidental gets the public repository set up.

I visited the library the morning after the meeting and noted the Administrative Record for the 2007 RCRA Permit Renewal is available there, and it seems to contain a fair amount of historical information. (The EPA portion contains 16 three-ring binders and KDHE's portion consists of an additional three-ring binder.) I did not locate the proceedings of the CIG Meetings, so if you need those, you might ask the librarian for some help to find them.

Ex. 6 PH

RCRA

Good morning,

I hope you had a good attendance at the CIG meeting last night. I was not at the meeting because the venue was switched at the last moment and held at the plant site instead of the scheduled Learning Center in Haysville. I am banned from ever setting foot on Oxy property because in the middle of last year Oxy received credible evidence that I am a threat to safety and security at the site. The charge was put forward by KDHE and supported by Oxy staff, according to the site manager.

I have a few questions about the carbon filters and will send them along later, since you are the only source of information available. My primary concern is about the proposed information repository. In trying to get others interested in the site situation information is scarce. A place where individuals can

go and get a brief history and or an update prior to the solutions to be imposed by the EPA would be nice. Please take a few minutes to update the repository event. Thank you.
